Subject: RE: Metrics 1.2.11 and 1.2.13 – REAL and SO/GI Data Collection "as of the last day of the MP"

Dear PRIME Entities,

We have been made aware of a technical limitation to carrying out new language in the specifications for metrics 1.2.11 and 1.2.13. The numerator for both metrics include references to the presence of the pertinent data (REAL or SO/GI) "as of the last day of the measurement period". This phrase was added to the PRIME Reporting Manual DY 12 Year-End to establish a clear end point for measurement and to standardize the measurement of these data elements across participating PRIME Entities. However, we recognize that the release date of the reporting manual did not provide sufficient time for PRIME Entities to be aware of this new requirement, and thus obtaining this snapshot on the required date is not possible for the upcoming DY 12 Year Report.

As such, we are providing the below solution for DY 12 Year-End Reporting.

Because of technical and timing limitations, for DY 12 we are allowing PRIME entities to capture this data at any point up to and including 9/30/2017. For future DY reports, PRIME entities will be required to capture snapshots of all the specified REAL and SO/GI data fields on the last day of the measurement period.

Thank you,

The PRIME Team
